

WHO WE ARE

VISION & MISSION

Operator to Partner

Q-Park moves from traditional parking operator to sustainable **mobility partner**

Location to Area

Q-Park moves from parking facility perspective to **area perspective**

Facility to Hub

Q-Park moves from operating parking facilities to building **Mobility Hubs**

Space to Services

Q-Park moves from providing parking spaces to enabling **mobility services**.

We are one of Europe's leading parking infrastructure owner and operator with more than 677,000 parking spaces in over 3,400 well-managed commercial parking facilities across seven Western European countries.

We mainly operate off-street parking spaces owned by us as well as parking spaces under concessions and long-term leases from public and private landlords.

We demonstrate that effective regulated and paid parking make an economic and sustainable contribution to cities and society, and that a positive parking experience impacts how people enjoy their visit, journey, shopping, commute or residence.

We have numerous mobility hubs which provide access to a variety of sustainable mobility services. Supporting urban accessibility, sustainability and liveability.

We provide sustainable mobility services such as:

- | last mile logistics and locker walls;
- | EV charging points and EV fleet charging hubs;
- | public transport, car sharing and bicycle parking.

Sustainable Mobility

Mobility hubs are the solution

We seek to combine public and private modes of transport with public and private parking facilities. When transport nodes converge, they form a hub, making individual and sustainable mobility feasible. Meeting the needs of residents, commuters, visitors and the economic function of an urban area.

Sustainable Mobility Partner (SMP)

As sustainable mobility partner, Q-Park helps get SUMP's moving in the right direction. We contribute our considerable knowledge and experience. Together with our partners we seek ways to make sustainable mobility in urban areas successful. Measures we can help introduce include:

- | transitioning from on-street to off-street parking;
- | transforming search traffic to destination traffic with smart navigation and pre-booking;
- | facilitating EV charging and shared mobility;
- | providing bicycle parking solutions;
- | offering logistics services at the edge of the city and before low- and zero-emission zones.

Vision

We aim to be the most preferred and recommended parking partner at strategic locations in Western Europe, based on functional quality, operational

that our mutual customers are not misinformed nor have access to outdated information.

Onsite services

Each of our Q-Park car parks is equipped with a unique set of convenient services so that our customers feel superbly looked after from arrival to departure and enjoy an exceptionally positive experience.

My Q-Park

My Q-Park is a support portal that enables customers to view their invoices, their loyalty programme progress and, where appropriate, their flex credits online. The portal also enables our customers to pay their invoices online.

Parking tariffs

Why we should embrace paid parking

Few people are familiar with the added value of deploying the right parking tariff strategy. There appears to be much negative public opinion about paying for parking, although a customer survey we conducted in 2014 shows that most of our customers are very aware of the principle of paid parking.

Setting the right price

Setting the right price, at a given location, on a given day, at a given time, and for the time used, is part of our daily work. Our three guiding principles are:

- I Profit - to ensure sustainable financial performance

Added value– to integrate mobility and other essential urban needs

Proactive approach – to enhance fair pricing for commuters, residents, people parking for short periods, and our partners

We need to find the perfect balance between price and demand. We work on the principle that it is unfavourable for an urban area if the occupancy rate of a parking facility exceeds 85%. Not having to queue to enter a parking facility is more economical for all involved; it is safer for cyclists and pedestrians, and better for the environment.

Price differentiation

We aim to have a variety of parking/price combinations available for our customers to consider. For instance: highly valued and high-priced parking within 300 metres of their final destination, reasonable priced parking slightly further away, and smart parking within a healthy walking distance.

Price differentiation enables us to benefit certain groups over others. For example, at shopping centres the cheaper rates for the first two or three hours favour shoppers rather than commuters, but at train stations, the daily tariff favours commuters.

Economic insight

We gain insight into the impact of various pricing strategy options by using proprietary calculation models. For example; our educational calculation model provides clear insight into why EUR 0.50 per

fifteen minutes is, from an operator 's perspective, not the same as EUR 2 per hour.

Would you like to do the maths and know the difference? Contact qurius@q-park.com.

Fair pricing

Wherever possible, we like to implement fair pricing strategies for the people parking, the surrounding communities as well as for the operator. For more information e-mail qurius@q-park.com.

Capacity optimisation
